

Not able to view/edit rmcm configurations from node2 appadmin in an HA setup

| | |
|---------------------------|--|
| Problem Summary | Node1 Appadmin displays the entire rmcm configuration correctly. However from node2 appadmin experiencing database inconsistency and unable to access/view the configurations under RMCM subsystem. Displaying the following message in the Appadmin. "There was an error reading/updating the database. Please contact the administrator." |
| Error Message | "There was an error reading/updating the database. Please contact the administrator." |
| Possible Cause | Node1 and node2 Config datastores are not in sync. |
| Recommended Action | Deactivate and Activate Config and Historical datastores on node2 from the appadmin control center->component activation page. |
| Release | Release 7.0, Release 5.0 |
