

Not all the recording files are backed up during backup using PUT

Problem Summary	Pre-upgrade tool backed up only 1.5 GB (per node) of recording files even though the CCX server had more.
Error Message	None.
Possible Cause	As per design.
Recommended Action	If the recording size is more than 1.5 GB, PUT will backup only the latest 1.5 GB of recording data per node, as there is a restriction for recording size in dactyl.
Release	Release 8.0(1)
Associated CDETS #	None.
