

## One-time\_and\_infrequent\_tasks

System Operations one-time and infrequent tasks are typically done when you are installing and configuring your Unified Communication products.

Most of these tasks are performed for each individual product in the system, or for the system as a whole. Tasks in this category include:

- ◇ Setting Log Levels and Configure Tracing (by product)
- ◇ Setting Alarms (traps/MIBs) Configure alarm-based notifications using email or web pages (by product)
- ◇ Verify Version Compatibility Perform System Audit to establish baseline information (by product and for the system)
- ◇ Create Network Topology Diagram Capture network after initial installation and following any adds/changes (by product and for the system)
