

Check to see if QoS is turned on within the ICM Router or PG

For all ICM releases, verify the following:

- On a private interface on Router/PG, check the following registry setting on side A
(Router or PG)/MDS/CurrentVersion/Process > EnableQoS (If 1, QoS is enabled)

 **Note:** Side B will always have it set to 0, regardless of QoS enabled or not.

- On Visible interface of PG, check the following registry setting on side A or side B:
DMP/CurrentVersion > EnableQoS
