

Recordings from CUBE fail with SIP error 488 Not Acceptable Here

Problem Summary	Calls forked from CUBE cannot be recorded.
Error Message	SIP traces show Cisco MediaSense receiving the Invite from CUBE, and then rejecting it with SIP/2.0 488 Not Acceptable Here .
Possible Cause	CUBE by default sends multipart Content-Type header to the MediaSense, but MediaSense does not support it. Notice the SIP Invite contains " Content-Type: multipart/mixed;boundary=uniqueBoundary ".
Recommended Action	You can prevent CUBE from sending multipart Content-Type to MediaSense by specifying <pre>signaling forward none</pre> In the dial-peer to MediaSense.
Release	All
Associated CDETS #	None
