

Replication broken between the two nodes of the HA setup

Problem Summary	Replication broken between the two nodes OR not able to get data for a selected interval while pulling reports OR the data in both the nodes are not identical.
Error Message	
Possible Cause	Replication broken between the two nodes
Recommended Action	<p>First step to fix the replication issue:</p> <p>a. Identify the datastore whose replication has been broken from Appadmin->DB Control Center page. b. Open appadmin-> control center ->Component Activation page. c. Deactivate node2 datastore whose replication has been broken. d. Activate it again. e. This should setup fresh replication if there are no other issues.</p>
