

## Replication broken between the two nodes of the HA setup

<b>Problem Summary</b>	Replication broken between the two nodes OR not able to get data for a selected interval while pulling reports OR the data in both the nodes are not identical.
<b>Error Message</b>	
<b>Possible Cause</b>	Replication broken between the two nodes
<b>Recommended Action</b>	<p>First step to fix the replication issue:</p> <p>a. Identify the datastore whose replication has been broken from Appadmin-&gt;DB Control Center page. b. Open appadmin-&gt; control center -&gt;Component Activation page. c. Deactivate node2 datastore whose replication has been broken. d. Activate it again. e. This should setup fresh replication if there are no other issues.</p>
<b>Release</b>	Release 7.0, Release 5.0
