

Reporting: High Refresh Rate for RealTime Reports Results in Flicker Effect

Problem Summary	You experience a flicker ("holiday lights") effect in the browser window that has multiple realtime reports that have been customized with a high refresh rate.
Error Message	None
Possible Cause	Multiple realtime reports are open, and they are set to a high refresh rate.
Recommended Action	Change the refresh rate to the Unified IC default, which is every 30 seconds.
Release	Release 7.5
