

**Reporting: Running reports that span daylight savings time changes**

<b>Problem Summary</b>	How does data appear in reports that are generated for a time range that includes dates before and after the biannual daylight savings time change?
<b>Error Message</b>	None
<b>Possible Cause</b>	Daylight savings time change
<b>Recommended Action</b>	<p>Report fields that show date/time take that value from the database timezone, as entered in the Timezone of the Data Source. That timezone is updated automatically when the daylight savings time change occurs.</p> <p>If you generate a report that spans dates before and after the daylight savings time change, then the date/time fields for days before DST will reflect that time, and the date/time fields for days after DST the DST time.</p>
<b>Release</b>	Release 8.0(1)
<b>Associated CDETS #</b>	None
