

**Reporting: Running reports that span daylight savings time changes**

<b>Problem Summary</b>	How does data appear in reports that are generated for a time range that includes dates before and after the biannual daylight savings time change?
<b>Error Message</b>	None
<b>Possible Cause</b>	Daylight savings time change
<b>Recommended Action</b>	Report fields that show date/time take that value from the database timezone, as entered in the Timezone of the Data Source. That timezone is updated automatically when the daylight savings time change occurs.  If you generate a report that spans dates before and after the daylight savings time change, then the date/time fields for days before DST will reflect that time, and the date/time fields for days after DST the DST time.
<b>Release</b>	Release 8.0(1)
<b>Associated CDETS #</b>	None
