

## MCP server is unable to keep up with incoming recordings

<b>Problem Summary</b>	The Unified MCP server is unable to keep up with the number of recordings it's supposed to capture.
<b>Error Message</b>	None.
<b>Possible Cause</b>	By default, if the battery backup is not present or not operational, the write cache is disabled on the RAID controllers in the C-Series. When the write cache is disabled, write throughput is lowered.
<b>Recommended Action</b>	The RAID controllers in the C-Series have an optional battery backup for the write cache. Add the battery backup cache to achieve better performance.
<b>Release</b>	Release 8.5(1)
<b>Associated CDETS #</b>	None.
