

SIP Calls Survivability Script Failing

Problem Summary	Survivability script does not seem to work.
Error Message	None.
Possible Cause	SIP calls from the IOS gateway are getting REFER to the ERROR DN, and critical error wav file is heard (or not heard). SIP calls originating from gateway do not contain "--CVP" in the remote party id header display name of the INVITE.
Recommended Action	The pots dial peer must match the incoming called number and be associated with the survivability service. For example: dial-peer voice 1000 pots service cvp-survivability incoming called-number 8T direct-inward-dial
Release	Release 7.0(2)
Associated CDETS #	None.
