Example Customer Scenario

This configuration example demonstrates how to set up an example UC deployment, in this case demonstrating how to set up the Cisco Unified Presence server with the Cisco Unified Personal Communicator client. The configuration example is broken up into modules. The first module demonstrates how to set up a basic availability and IM only deployment. The second module demonstrates how to add voice functionality to your deployment. In this example, the customer that has purchased the UC solution is called Example Solutions Inc. Their domain name is called Example.com, illustrated below. Within the Example.com network, the following servers are deployed:

- CUCM server, version 8.x
- CUP server, version 8.x
- Active Directory server/Postgres database

There are three users working in the company Example Solutions Inc. In the Example.com network, a PC is deployed for each of these three users. The user details are provided in the table below.

Charles Holland	Sue Miller	Neela Patel
