Script porting issues

Problem Summary	Scripts which use windows paths, for e.g- c:\asdf\sdf.txt, to pick up information() or to write information(write document step) will fail.
Error Message	Security Violation exception or file not found exception in MIVR logs
Possible Cause	This is due to the fact the directory structure in VOS is very different from that in windows. And also due to the fact that we allow data to be written or picked up only from a particular folder in the server.
Recommended Action	Performs these actions: 1. There is a specific folder for these operations and its called the Customer folder. So all the hardcoded or passed windows paths will need to be changed in the affected scripts.
Release	Release 8.0(1)
Associated CDETS #	None.
