

SocialMiner APIs - Incorrect Parameter Data Types Result in Errors

Problem Summary	You see a error when you run an API.
Error Message	HTTP 400 (Invalid Data)
Possible Cause	You have set a variable with an incorrect data type. For example, polling interval is defined as an interval, and you enter <i>five</i> instead of 5. Data-type rules apply to both required and optional fields.
Recommended Action	Change the parameter to the correct data type.
Release	Release 8.5(x)
Associated CDETS #	None
