

**SocialMiner APIs - Incorrect Parameter Data Types Result in Errors**

<b>Problem Summary</b>	You see a error when you run an API.
<b>Error Message</b>	HTTP 400 (Invalid Data)
<b>Possible Cause</b>	You have set a variable with an incorrect data type. For example, polling interval is defined as an interval, and you enter <i>five</i> instead of 5. Data-type rules apply to both required and optional fields.
<b>Recommended Action</b>	Change the parameter to the correct data type.
<b>Release</b>	Release 8.5(x)
<b>Associated CDETS #</b>	None
