

## SocialMiner Installation - Not enough disk space in the common partition for upgrade

<b>Problem Summary</b>	An upgrade fails with a message that there is not enough disk space in the common partition to perform the upgrade.
<b>Error Message</b>	There is not enough disk space in the common partition to perform the upgrade. Please use either the Platform Command Line Interface or the Real-Time Monitoring Tool (RTMT) to free space on the common partition.
<b>Possible Cause</b>	The common partition does not have enough space left.
<b>Recommended Action</b>	Use the <i>show diskusage common</i> CLI command to check the disk usage and then delete unused logs (old log files that are no longer needed) from the common partition to free up disk space.  To help avoid this issue, the <a href="#">RTMT Administration Guide</a> has a Log Partition Monitoring section. This section explains how to configure a purge of the log files.
<b>Release</b>	Release 9.0(x), 10.0(1), 10.5(1), 10.6(1)
<b>Associated CDETS #</b>	None
