File Server Startup

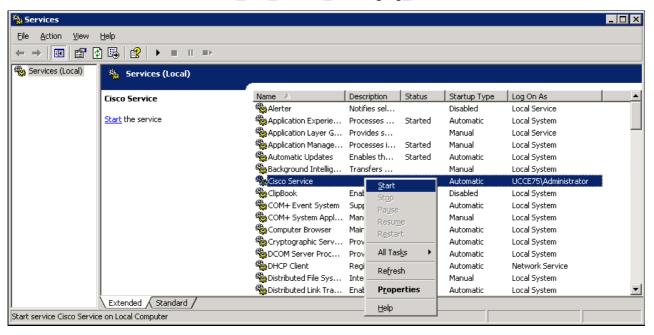

The File Server is simply a Windows Universal Naming Convention (UNC) share named "cisco" that is pointed at the C:\CIM\ directory on the File Server. As long as this folder is shared (and the user has the right permissions), there is no startup action needed.

Messaging Server Startup

Contents 1

Start_File_Server,_Messaging_Server

Note: 2 Java.exe are initially started; one ends @ ~20MB Mem Usage

• Total Java.exe at finish: 1 @ ~200MB Mem Usage

• Total Javaw.exe at finish: 0

• Total time for Startup: 25 seconds
