

Subdialog_return_-_caller_input_error

Problem Summary	Subdialog return - caller input error
Error Message	NA
Possible Cause	NA
Recommended Action	<p>The CVP Subdialog Return element requires a yes or no value for its Call Input parameter. In the screen shot below, the user first left the Caller Input value blank. When the user tried to "validate" the application the user received error shown in "Call Studio Problems." The screen shot shows the user then typed in y to fulfill the requirement. When the user tries to validate the application again, the error will no longer be displayed.</p> 
Release	NA
Associated CDETS #	None.
