

System: SQL Hardening Failure

Problem Summary	During the configuration of both the Unified IC and the Archiver databases, SQL Hardening fails.
Error Message	Error indicating SQL Hardening failure.
Possible Cause	Various.
Recommended Action	None. SQL Hardening is the process of allowing connection to MS SQL Server by Windows authentication *only*. If SQL Hardening fails for any reason, then it is still possible to connect to MS SQL Server using *both* Windows authentication and SQL authentication. The failure of SQL Hardening thus has no effect on functionality.
