

TTS Provider shows Last Status when Added Again

Problem Summary	When adding a TTS provider, its status shows the last Status. This happens even before creating any servers for it.
Error Message	The TTS provider status is incorrect.
Possible Cause	After deleting a provider and all the servers along with it, if a new provider is created, it continues to use the previous configuration and does not get refreshed.
Recommended Action	Click Refresh for that provider. This will cause the status of the provider to go UNKNOWN state as expected.
Release	Release 8.0(1)
Associated CDETS #	None.
