

## Talk:Disable\_LRO

There seems to be conflicting information on if/when this is needed. Here is the VMWare KB article stating that disabling LRO is not required on ESXi 5.0:

[http://kb.vmware.com/selfservice/microsites/search.do?language=en\\_US&cmd=displayKC&externalId=1027511](http://kb.vmware.com/selfservice/microsites/search.do?language=en_US&cmd=displayKC&externalId=1027511)

From that page: This issue has been resolved in ESX/ESXi 4.1 Update 2. For more/related information, see VMware ESX 4.1 Update 2 Release Notes This issue does not affect Linux virtual machines on ESXi 5.0

We need all of these sites to align and have correct info. If the KB is incorrect, and LRO must be disabled on 5.0, please make an explicit remark that our Wiki is intentionally contradicting the vmware site.

12/17/2012 Excerpt from the Cisco support community: <https://communities.cisco.com/message/103627>

Link indicates that **LRO is not required** for some versions of CUCM:

- UCM 8.0 on vSphere 4.1 or 5.0 or higher - DISABLE LRO
- UCM 8.5 on vSphere 4.1 or 5.0 or higher - DISABLE LRO
- UCM 8.6 on vSphere any - do NOT need to disable LRO
- UCM 9.0 and future on vSphere any - do NOT need to disable LRO

I opened a Cisco TAC case **624198237** and the engineer I spoke with also confirmed this information to be correct. Please update the docwiki to reflect new data regarding LRO.
