

## Talk:How\_to\_Use\_the\_AFG\_with\_the\_Virtual\_Floppy\_Drive

I've created cucm861sub.flp file and uploaded it to the datastore on ESXi 4.1, then mapped to the floppy, i.e. I followed your procedure to the last letter. Still, after applying command I'm receiving following error:  
"CANNOT LOCATE CONFIGURATION FILE"

I've used Winimage to create 1.44MB floppy that contains only one file, called platformConfig.xml (file was downloaded directly from CCO). And yes, I've checked that my floppy is connected to the VM.

Please help!!!
