

## Talk:Implementing\_Virtualization\_Deployments

We need an entry on the Implementing virt deployments similar to LRO that has customers/users disable interrupt remapping per VMware article 1030265:

[http://kb.vmware.com/selfservice/microsites/search.do?language=en\\_US&cmd=displayKC&externalId=1030265](http://kb.vmware.com/selfservice/microsites/search.do?language=en_US&cmd=displayKC&externalId=1030265)

This issue causes many tac cases. Symptoms are loss of access to the UC VMs. Can still access host via vsphere, but usability is impacted. Will see alerts in Vsphere regarding lost access to datastore volumes, and also alerts for Disk I/O latency. If you select a VM in Vsphere and click on the console for that VM, Vsphere will lock up.

**Please correct the links that point to installing on a B and C Series UCS Server - you receive a 404 error.** It looks like the document has been removed. But i have found this document titled " Cisco UCS C-Series Servers VMware Installation Guide" here at this link:

[http://www.cisco.com/en/US/docs/unified\\_computing/ucs/os-install-guides/vmware/b\\_C-Series\\_VMware\\_Install.html](http://www.cisco.com/en/US/docs/unified_computing/ucs/os-install-guides/vmware/b_C-Series_VMware_Install.html)
