When you create a PDF, you get 37 pages only and a fraction of the necessary (and previously available) terms in the ITA. Can you provide better instructions on accessing these?

Hi, Thanks for your comment! When you create the PDF, all ITA terms from the wiki are in the PDF in the 37 pages. The ITA used to be on Cisco.com years ago and when the content was migrated only the unique terms and definitions were kept. This is primarily because the common terms found on wikipedia were more up-to-date. Hope this helps!
