

Talk:OpenStack:Folsom-Multinode

I'm deploying Cisco Openstack folsom distribution(<http://docwiki.cisco.com/wiki/OpenStack:Folsom>), when I took the procedure "Customizing the build server", there's no 'clean_node.sh' file in the /etc/puppet/manifests directory. I'm sure I have got the Cisco Edition puppet modules from Cisco's GitHub repository to the manifests directory. Is there anybody encountering this problems? (Note that I'm trying to deploy a all-in-one folsom distribution) or anyone knows is there better folsom distribution? Thanks!
