

## Talk:Unified\_Communications\_Virtualization\_Supported\_Applications

This document is incorrect for Cisco SocialMiner. Cisco SocialMiner 8.5(3) supports spec-based model therefore it can be supported by any hardware platform that meets the necessary specifications. It is not limited to the specific UCS hardware models.

[http://docwiki.cisco.com/wiki/Virtualization\\_for\\_Cisco\\_SocialMiner](http://docwiki.cisco.com/wiki/Virtualization_for_Cisco_SocialMiner)

This is also incorrect for CVP. It says CVP is not supported on Specs based servers, however the other link says it is supported with FC SAN storage in place.
