Timeout attribute for non-input does not work

Problem Summary	The timeout attribute when set to 0 causes VXML script execution to wait forever when run with Nuance. Nuance implements a timeout of 0 by waiting indefinitely, which is not compliant with the VXML specification.
Error Message	None.
Possible Cause	Using timeout=0, for example, <form id="form1"><property name="timeout" value="0s"></property> <field name="myField"> <prompt count="1"> No input expected. Say nothing </prompt>.</field></form>
Recommended Action	Using a timeout of 1 ms will effectively provide the behavior expected by the VXML specification; that is, <pre></pre>
Release	Release 7.0(1)
Associated CDETS #	None.
