

## Editing Reporting Server: Installation and Purge

<b>Problem Summary</b>	You begin installation of the Reporting Server over a weekend or a three-day break, and you have scheduled a purge.
<b>Error Message</b>	Error Log shows "Data found in the Remainder Fragment."
<b>Possible Cause</b>	The purge process allocates space up to two days in advance of it being needed. It can only allocate space before the space is required; it cannot allocate space for 'today'. The installation process allocates the first two days worth of space. If the installation is started on a Friday and then picked back up on a Monday, disk space will not be allocated for Sunday's data or Monday's data.
<b>Recommended Action</b>	Execute a purge before the second midnight from the time of the start of the installation process.
<b>Release</b>	Release 8.0(1)
<b>Associated CDETS #</b>	None
