

Editing Reporting Server: Installation and Purge

Problem Summary	You begin installation of the Reporting Server over a weekend or a three-day break, and you have scheduled a purge.
Error Message	Error Log shows "Data found in the Remainder Fragment."
Possible Cause	The purge process allocates space up to two days in advance of it being needed. It can only allocate space before the space is required; it cannot allocate space for 'today'. The installation process allocates the first two days worth of space. If the installation is started on a Friday and then picked back up on a Monday, disk space will not be allocated for Sunday's data or Monday's data.
Recommended Action	Execute a purge before the second midnight from the time of the start of the installation process.
Release	Release 8.0(1)
