

Reporting Server Logging Causes Performance Issues

Problem Summary	Multiple performance issues may be seen with reporting server performance. For example, reporting server may stop righting to the database for a time period and no data is recorded for the time period. The RPT interval stats show 0 database writes during the period.
Error Message	No error message is displayed.
Possible Cause	The database is set to use unbuffered logging mode. Change the database to use buffered logging mode.
Recommended Action	To verify logging mode: <pre>dbaccess sysmaster Select * from sysdatabases where name='cvp_data';</pre> To change the database to use buffered logging mode: <pre>Ontape -B cvp_data</pre>
Release	Unified CVP 4.x, Unified CVP 7.x
