

**System CLI: Missing data**

<b>Problem Summary</b>	The result of a command seems to miss part of data.
<b>Error Message</b>	No particular error message.
<b>Possible Cause</b>	This is most likely an issue on the server side. The System CLI collects whatever data it receives from the server.  In addition, a device must be deployed on the Operation Console in order for that device to be visible to the System CLI.
<b>Recommended Action</b>	Check the Operation Console to make sure devices are deployed. Make sure devices are run normally. Check device trace messages for errors.
<b>Release</b>	8.0(1) and later
<b>Associated CDETS #</b>	None.
