

VXML Server - error event, error.badfetch, is not thrown when an audio file cannot be played

Problem Summary	Error event, error.badfetch, is not thrown when an audio file cannot be played or is not found on the media server
Error Message	You will see a message like the following in the VXML gateway log: Apr 2 2010 07:28:19.452 EST: //1//HTTPC:/httpc_callback: URL: http://10.20.20.25:7000/audio/someaudio.wav , Server rsp_code(404), fd(0) but no error.badfetch will be thrown to the VXML Server.
Possible Cause	"vxml version 2.0" is configured on the VXML gateway but "vxml audioerror" is not configured.
Recommended Action	Add "vxml audioerror" to your gateway configuration.
Release	8.0(1)
Associated CDETS #	None
