

Diagnostic Portal API returns partial data

Problem Summary	Diagnostic Portal API returns partial data
Error Message	Partial data are returned from a WSM query.
Possible Cause	Abnormal status of CVP devices.
Recommended Action	Make sure all CVP services are running normally. For example, if VXML server is down, WSM is not able to get the VXML version data when it handles a get version request.
Release	8.0(1) and later
Associated CDETS #	None.
