## Introduction

This page documents UC application and version compatibility with [virtualized hardware support models](#):

- UC on UCS TRC
- UC on UCS Specs-based
- Third-party Server Specs-based

"Specs-based" used by itself refers to both UC on UCS Specs-based and Third-party Server Specs-based.

Support information is current through release date of **Cisco Unified Communications 9.1(1)**.

Click on the application name for additional product-specific requirements and information (if any).

Notes:

1. ' \* 'Requires 8 core configuration and sufficient vRAM (12G to 16G)
2. Compatibility based on vCPU and vRAM requirements met by UCS platforms. NMTG/ECMBU does not formally certify hardware platforms.
3. PCA = Prime Collaboration Assurance server PCP = Prime Collaboration Provisioning server
4. vDisk may require offboard resources due to size or performance.
