

## Problems Saving AW Configuration Data

<b>Problem Summary</b>	Users cannot save configuration data when using the configuration manager tool on ADS1; also, modifications to a user on ADS2 do not transfer to ADS1.
<b>Error Message</b>	
<b>Possible Cause</b>	This was due to the loss of access privileges for the ADS1 distributor service login account. The ems trace logs for Update ADS process on ADS1 showed database login errors.
<b>Recommended Action</b>	Re-run the ADS1 distributor setup from the install media. This will re-run scripts that gives database access privileges to the distributor service login account.
<b>Release</b>	Release 7.5(1) and 8.0
<b>Associated CDETS #</b>	None.
