

## Router Process Rejects Logger Configuration Data Load

<b>Problem Summary</b>	During initialization, the Router process rejects the configuration data load from logger.
<b>Error Message</b>	None.
<b>Possible Cause</b>	This occurs because the Logger is busy and does not send a heartbeat to the Router. The Router waits for the heartbeat for 2 minutes (the default interval), doesn't receive a heartbeat, and finally rejects the data.
<b>Recommended Action</b>	Increase the following registry key value: Router\CurrentVersion\Configuration\Config\LargeTableTimeout
<b>Release</b>	Release 7.5(1) and 8.0
<b>Associated CDETS #</b>	None.
