

Router Process Rejects Logger Configuration Data Load

Problem Summary	During initialization, the Router process rejects the configuration data load from logger.
Error Message	None.
Possible Cause	This occurs because the Logger is busy and does not send a heartbeat to the Router. The Router waits for the heartbeat for 2 minutes (the default interval), doesn't receive a heartbeat, and finally rejects the data.
Recommended Action	Increase the following registry key value: Router\CurrentVersion\Configuration\Config\LargeTableTimeout
Release	Release 7.5(1) and 8.0
Associated CDETS #	None.
