

Installation Keeps Failing in Network Connectivity Validation Page

Problem Summary	During the installation of the Cisco Unified Presence Server, the installation fails at the Network Connectivity Validation screen.
Error Message	None
Possible Cause	Wrong hostname is configured in the server.
Recommended Action	Make sure the CUPS hostname is configured correctly and it matches the name specified in the Call Server page of the CM Publisher.
Release	Release 7.0(2)
Associated CDETS #	None.
Possible Cause	Wrong CM Publisher hostname or password.
Recommended Action	Make sure the CM Publisher's hostname and password are entered correctly. If you have DNS server setup, make sure the CM Publisher's hostname is resolvable.
Release	Release 7.0(2)
Associated CDETS #	None.
