

VXML Server Fails After CVP 7.0 Upgrade

Problem Summary	The VXML Server application fails following an upgrade to CVP 7.0.
Error Message	None.
Possible Cause	Customer audio files that reside in the .war expansion directory (CVP_HOME/VXMLServer/Tomcat/webapps) are not preserved upon upgrade to CVP 7.0.
Recommended Action	Redeploy custom audio files to the VXML Server, but not to the .war expansion directory because the contents of this directory are not preserved at upgrade time.
Release	Release 7.0(2)
Associated CDETS #	None.
