

Webview_Checklist

Points to Note:

Always check if Webview third party software's are installed fine and then Webview (Please check first step in below table as how to verify if 3rd party software's are installed fine). If not please re-install Webview third-party software's and Webview.

No Customized settings(security or other) should be applied on Webview servers as its not supported. (i.e. Customized OS, Customized IIS security settings is not supported for Webview).

Java version should always be the version packaged in Webview Third party installer package, it should not be upgraded to higher versions unless done by ICM installer itself.

Errors	Checklist	Resolution Steps/Comments
<p>Cannot access Webview reporting, get error 404 : page not found when accessed from client's PC</p>	<p>Are all the 3rd party Software's Of Webview are installed properly , up and running?</p>	<p>Make sure all these softwares are installed properly</p> <p>To Check the 3rd party Software's are installed properly</p> <ol style="list-style-type: none"> In the Command Prompt type the following command <code>java -version</code> This should display the version of Java installed on the server. Go to Start --> Programs and Services Login page appears Give the login name and blank password. We can see the Home page. Go To Start --> Programs and Services In Tools Menu --> Content Advisor Select EAServer Manager Login as : UserName : jagadmin Port Number : 9000 Host Name : Machine Click connect. If connected Check if you are able to access the reporting page. <p>If all the above is working fine then please try below steps.</p>
	<p>Is Ping from Client PC to Webview Server successful?</p>	<p>If yes, then please try below steps.</p>
	<p>Is Webview Server is added in trusted sites?</p>	<p>In Internet explorer window click on Tools --> Internet Options checkbox for "Require SSL" is checked. https://webview_server.com</p>
	<p>Is ActiveX Controls installed and enabled?</p>	<p>In Internet explorer window click on Tools --> Internet Options enabled. Download signed content is checked.</p>
	<p>Is SSL and TLS option enabled?</p>	<p>In Internet explorer window click on Tools --> Internet Options 3.0</p>
	<p>Is IIS and Jaguar services up and running on Webview Server?</p>	<p>Make sure IIS and Jaguar services are running on the server.</p>
<p>Webview</p>	<p>Is the following registry keys set to 1:</p>	<p>Webview retrieves even if the following registry keys are set to 1:</p>
